

Hello. I would like to urge you to use the 2.5 GHz band to expand the amount of unlicensed spectrum instead of turning it over to a particular industry.

The current 2.4 GHz spectrum has been great for individuals. Personally, I use it for my cordless phone, for a wireless audio transmitter/receiver that allows me to play audio from my computer to my stereo system, and for wireless Internet, which has to be one of the greatest inventions ever. I now carry a laptop computer with me around my house, able to use it anywhere.

However, this 2.4 GHz band is getting crowded. Already I sometimes have trouble use my wireless audio at the same time as my cordless phone. And with more and more people using wireless access points, I know it is only going to get worse.

Please don't give away the 2.5 GHz band. Allocate it to the people, so we can continue to enjoy our wireless lifestyle without having to pay some company to use it.

Thank you for listening.
